THE HEBREW AI TOOLKIT

2026

SHAY PELEG

CLAUDE FOR HEBREW

What is it ↷

★ Writes natural Israeli Hebrew — not dictionary Hebrew. Handles slang, RTL, masculine/feminine agreement.

When to use it ↷

★ When your customer base is Israeli and English-first AI tools feel foreign to them.

Claude

Claude Code

Gemini

GEMINI FOR RESEARCH

What is it ↷

★ Searches Hebrew sources (ynet, calcalist, TheMarker) and returns sourced answers in Hebrew or English.

When to use it ↷

★ When you need Israeli market data or competitor intel that Google alone misses.

Gemini

Perplexity

Claude

WHATSAPP BUSINESS

What is it ↷

- ★ The phone number Israelis actually answer. Connect it to AI for 24/7 replies, bookings, and payments.

When to use it ↷

- ★ Always. WhatsApp is Israel's email. Treating it as optional is leaving money on the table.

WhatsApp

n8n

Claude

MORNING API

What is it ↷

★ Israeli invoice + receipt API that handles VAT, signed tax invoices, and withholding exemptions natively.

When to use it ↷

★ Any automation that needs to issue legit cheshboniot or handle payments for an Israeli business.

n8n

Supabase

Vercel

HEBREW VOICE CLONE

What is it ↷

★ ElevenLabs v3 clones your voice from 30 seconds of Hebrew audio — use it for bots, ads, podcasts.

When to use it ↷

★ When missed WhatsApp voice notes cost you leads and you want a bot that sounds like YOU.

ElevenLabs

Vapi

HeyGen

HEBREW WHISPER

What is it

- Open-source speech-to-text. `medium` model handles Hebrew voice notes well, runs locally, no per-minute fees.

When to use it

- When you want to transcribe customer calls or voice notes without sending audio to OpenAI.

OpenAI

HuggingFace

NVIDIA

RTL-AWARE TAILWIND

What is it ↷

- ★ Use `rtl:` variants + `dir="rtl"` so your site flips properly for Hebrew without rewriting every component.

When to use it ↷

- ★ Any website targeting Israeli customers. English-only sites signal "not for you" in 2 seconds.

Tailwind

Next.js

NEXT.JS I18N

What is it

- Built-in locale routing — `/he/pricing` and `/en/pricing` from one codebase, with middleware locale detection.

When to use it

- When you have Hebrew AND English customers and need one site that serves both cleanly.

Next.js

Vercel

Tailwind

HEEBO FONT

What is it ↷

★ The Hebrew font that actually looks native on screens — not the system default that screams "generic website."

When to use it ↷

★ Every Hebrew site. Google Fonts, free, one line to install. This alone raises perceived quality.

Tailwind

Next.js

SUPABASE + RLS

What is it ↷

- ★ Postgres with row-level security — customer data isolation out of the box, Israeli privacy rules friendly.

When to use it ↷

- ★ Any multi-tenant SaaS or any app with real personal data. The free tier covers most small businesses.

Supabase

Next.js

Vercel

HEBREW AD COPY

What is it ↷

★ AI that writes Meta + Google ads in natural Hebrew with Israeli cultural references, not translated slogans.

When to use it ↷

★ When your CPC is high because your ads read like they're addressed to someone else's customer.

Claude

Gemini

ChatGPT

LOCAL AGENTS

What is it ↷

- ★ Claude agents that scrape Israeli sources (Google Maps, Ynet business, Bizportal) for lead research.

When to use it ↷

- ★ When outbound is your channel and generic tools miss 80% of Israeli business signal.

Building AI systems for small business

The Israeli market is small. But the tools to serve it are world-class now.

Want the exact Hebrew-first stack I use to build for Israeli small businesses?
